

Instructions to Authors

Experimental Psychology publishes innovative, original, high-quality experimental research. The scope of the journal is defined by experimental methodology and thus papers based on experiments from all areas of psychology are welcome. To name just a few fields and domains of research, *Experimental Psychology* considers manuscripts reporting experimental work on human learning, memory, perception, action, language, thinking, problem-solving, judgment and decision making, social cognition, and neuropsychological aspects of these topics. Apart from the use of experimental methodology, a primary criterion for publication is that research papers make a substantial contribution to theoretical research questions. For experimental papers that have a mainly applied focus, *Experimental Psychology* is not the appropriate outlet. A major goal of *Experimental Psychology* is to provide a particularly fast outlet for such research. Authors usually receive an editorial decision within 6 weeks of manuscript submission.

Experimental Psychology Publishes the Following Types of Articles

Experimental Psychology publishes Research Articles, Short Research Articles, Theoretical Articles, and Registered Reports. Replication studies should be submitted as a Registered Report. The word count includes the text and any notes and appendices. The title page, abstract (150 word limit), references, raw data, and other electronic supplemental material (ESM) do not count for the word limit. In case the word limits do not allow for a comprehensive report of methods, analyses, and results, additional electronic supplemental materials (ESM) can be provided to help disseminate the research and support replication of the reported studies.

Research Articles and Short Research Articles

Research Articles and Short Research Articles report original experimental research. Research Articles reporting a series of more than two experiments may contain up to 10,000 words. Short Research Articles reporting one or two experiments should not exceed 5,000 words.

Theoretical Articles

Theoretical Articles provide expert reviews of a relevant field of research, integrative accounts of ongoing research programs, or presentations of innovative theories and models in experimental psychology. Theoretical Articles can also focus on methodological issues and statistical innovations that are particularly relevant for experimental psychologists. Theoretical Articles should not exceed 10,000 words, but extensions are possible if the complexity of the topic requires a more comprehensive outline.

Registered Reports

Registered Report submissions are *research proposals* detailing the theoretical background, method, and data analysis for a planned but not yet conducted experiment. Editorial decisions about in-principle acceptance are based on the (peer-reviewed and revised) proposal and therefore outcome-independent. Following initial acceptance, the study protocol is publicly pre-registered in an independent institutional registry (e.g., <http://osf.io>) before data collection and analysis, which are to proceed in accordance with the

accepted protocol. Results are published regardless of the direction or statistical significance of the outcome.

Word limits depend on the number of experiments in a Registered Report (i.e., 5,000 words for one or two experiments; 10,000 words for more than two experiments). Manuscripts will be reviewed in two stages:

Stage 1

- At Stage 1, the manuscript must contain an Introduction section that describes the theory and the specific hypotheses to be tested in the proposed experiment. The manuscript must explain the theoretical significance of the proposed experiment. Successful submissions will use established methodologies to test existing theories. The Registered Report is not well-suited for methodological innovations or exploration. It is a mechanism for confirming or disconfirming theoretical predictions.
- The Stage-1 submission should report previous related experiments. If the proposed experiment follows up on the authors' previous work (e.g., exploratory studies), at least a brief description of this work should be given. If the proposed research uses an adaptation of an established methodology, or if the researcher is new to the field, pilot studies may be required to demonstrate the effectiveness of the proposed methodology and/or the effect size of the proposed manipulation. The Registered Report category welcomes multiple-study submissions. A Stage-1 manuscript may report a series of non-registered studies on which the to-be-registered study is based. In this case, the manuscript (as well as the final article) must clearly distinguish between initial nonregistered studies and the final registered study (i.e., the section describing the final registered study must be titled "Registered Experiment").
- The Stage-1 submission must contain a Method section that provides a detailed description of the proposed research (e.g., specify experimental conditions precisely enough to allow for replications; specify all the independent and dependent variables in the experiment, even if not deemed important). In case word limits do not allow for a comprehensive description, authors may provide supplementary materials (e.g., in-depth methodological detail, digital study materials, description of methods, etc.) that help reviewers and readers scrutinize the study protocol and the results. The research proposal must explicitly justify the proposed number of observations and participants (e.g., by way of statistical power analysis). To ensure that the results are informative regardless of outcome (e.g., by keeping both Type-I and Type-II error probabilities comparably small), high statistical power or precision will typically be required. Authors are required to confirm that the proposed research has not been conducted at the time of Stage-1 submission.
- The Stage-1 submission must contain a Data Analysis section that specifies in detail the data analysis procedures that will be used. The manuscript must describe the variables to be tested, the statistical tests or procedures to be conducted, as well as the anticipated patterns of results along with their interpretation with regard to hypotheses. Rules for data elimination (e.g., exclusion criteria, outlier trimming) must be specified a priori.

Stage 2

- After a Registered Report submission is accepted at Stage 1, the accepted protocol must be publicly pre-registered (see above) and the research conducted according to the protocol. The Stage-2 revision should contain essentially the same Introduction, Method, and Data Analysis sections as the Stage-1 submission, plus the pre-registration link and the new Results and Discussion sections. Additional post-hoc analyses may be included but must be clearly distinguishable from the registered analyses.
- Stage-2 submissions will be evaluated with regard to their adherence to the accepted Stage-1 protocol. Any unforeseen deviations from the approved protocol should be noted in the cover letter and the manuscript. Substantive deviations will lead to rejection as a Registered Report.
- Stage-2 submissions will be evaluated with regard to whether the conclusions follow from the results. The preliminary acceptance at Stage 1 guarantees the publication of some version of the manuscript, given that the study and analysis were conducted as proposed. However, Stage-2 submissions may be subject to one or more rounds of revisions to ensure that the Results and Discussion sections are adequate and balanced.

Reporting Standards

At *Experimental Psychology*, we understand that transparency is an essential part of the scientific method. Submissions are required to adhere to the following standards:

Recognition and Citation

In recognition of other researchers' theoretical and empirical contributions to an author's work, these contributions must be appropriately cited in the manuscript, preferably using DOIs. This requirement also extends to data, program code, and other methods used in a study.

Design and Analysis

Study design and data analysis must be reported transparently (i.e., including all manipulations and measures used; how sample size was determined; which data were excluded, if any).

Methods and Materials

Authors are encouraged to make available the materials and methods used to conduct the research (including the code used in data analysis). Authors must indicate in the manuscript (e.g., in a footnote) whether they share materials for purposes of replicating the procedure or reproducing the results, and where any shared material will be available (e.g., e-mail address; URL at public repository; or ESM file to be published with the electronic article, see below).

Preregistration

To transparently document the confirmatory nature of a Registered Report, the proposal accepted at Stage-1 must be publicly pre-registered in an institutional registry, and the link to this public preregistration must be included in the published article.

Data Sharing

Manuscript submissions must be accompanied by an electronic file, or by a permanent URL pointing to a file located in an institutional repository (see <http://www.re3data.org/> for a list

of repositories) containing the data and documentation necessary to reproduce the reported results (exceptions may be made in special cases upon request). If raw data are submitted as an electronic file, the data will be published as electronic supplementary material (ESM) with the online version of the article (see section ESM below for instructions).

Manuscript Submission

Manuscripts as well as raw data and electronic supplementary material (ESM) files can be submitted electronically at <http://www.editorialmanager.com/exppsy>. Submission of manuscripts is taken to imply that neither the manuscript nor any component of it has already been published or is currently under consideration by another journal. Please follow the online instructions for submission. Should you have any technical queries regarding this process, please contact Juliane Munson, Hogrefe Publishing, Tel. (+49) 551 99950-422, Fax (+49) 551 99950-425, E-mail juliane.munson@hogrefe.com.

Manuscript Format

Manuscripts should be prepared according to the Publication Manual of the American Psychological Association (6th ed.). In particular, statistical and mathematical copy, as well as references and their text citations, should conform to the Publication Manual.

Figures and Tables

Figures and tables should be numbered using Arabic numerals. The same information should not appear in both a figure and a table. Each table and figure must be cited in the text and should be accompanied by a legend on a separate sheet. Figures must be supplied in a form suitable for reproduction: preferably vector graphics files (e.g., .svg) or high-resolution bitmaps (e.g., .jpg or .tiff, 600 dpi). Figures will normally be reproduced in black and white only. While it is possible to reproduce color illustrations, authors are reminded that they will be invoiced for the extra costs involved.

Electronic Supplementary Material (ESM)

To allow authors to comprehensively report their methods, analyses, and results, electronic supplemental material (ESM) files can be submitted. ESM files may contain materials that were used to carry out the research (e.g., participants' instructions, audiovisual stimuli, software for presentation or analysis, video footage of the experimental setup) or other relevant items that cannot be reproduced in printed form. ESM files will be published online as received from the author(s) without any conversion, testing, or reformatting. They will not be checked for typographical errors or functionality. The responsibility for the content and functionality remains entirely with the author(s). Hogrefe Publishing does not provide technical support for the creation or viewing of the supplementary files. If necessary, authors should seek the assistance of their local IT department. Like the manuscript, ESM should be original and not previously published. If previously published, it must be submitted with the necessary permissions. Note that the ESM, just like the article itself, are permanent records and may not be altered once they have been published online.

Submission

The number of submitted ESM files should be limited to 10. The file size should be kept as small as possible, not

exceeding 10 MB in total. All file formats are accepted (with the exception of executable files, e.g., .exe, .com, or .msi; such files can be made available to authors by uploading them to an appropriate repository and including the URL in the paper). Commonly used file formats that are accessible by most readers are preferred. All ESM files should be submitted in a single .zip file, separately from the other files that are part of the submission.

Referring to ESM files in the Manuscript

All ESM files must be referred to in the article (as for tables, figures, and appendices) and should be numbered in the order in which they are mentioned in the text. Follow the example:

– For a recording of the participant instructions listen to the audio file in Electronic Supplementary Material 1.

or:

– (listen to the audio file in Electronic Supplementary Material 1)

or:

– (the audio file is provided in Electronic Supplementary Material 1)

If appropriate, you may combine several ESM elements into a single file. For example:

– See Tables 1–3 in Electronic Supplementary Material 1.

In a section titled “Electronic Supplementary Material” at the end of your article, before the reference section, list all ESM files in the order in which they are referred to in the text. Give the title of each file. The file names specified in this section must match the file names of the submitted files. Optionally, you may also provide a short description for each file (max. 20 words). Please note that only the title and the description will appear in the article; the file name will not. It is for reference purposes only. Follow the example:

– ESM 1. Auditory instructions (instructions.mp3). (= title and file name)

This audio file contains a recording of the instructions given to participants. (=description)

– ESM 2. Raw data collected in Experiment 3 (exp3_2015.csv)

This file contains all data collected in Experiment 3.

Review Process

Manuscripts are usually reviewed by 2 or 3 reviewers. The reviewers will be asked to complete their review within 3 weeks, and authors will receive editorial feedback from the action editor within 4–6 weeks. There are four kinds of decisions: accept, accept conditionally on minor changes, reject with an encouragement to resubmit, and reject. The entire review process is completely reliant on electronic communication in order to ensure efficient processing. Revised papers will be treated as new submissions if they are resubmitted more than 6 months after the editorial decision. Stage-2 submissions of Registered Reports that have been accepted at Stage 1 will be treated as new Research Article submissions if they are resubmitted more than 12 month after the editorial decision (extensions may be granted by the Editor upon request).

Offprints

Hogrefe will send the corresponding author of each accepted paper free of charge an e-offprint (PDF) of the published

version of the paper when it is first released online, excluding ESM. This e-offprint is provided for the author’s personal use, including for sharing with co-authors.

Copyright Agreement

By submitting an article, the author confirms and guarantees on behalf of him-/herself and any coauthors that the manuscript has not been submitted or published elsewhere, and that he or she holds all copyright in and titles to the submitted contribution, including any figures, photographs, line drawings, plans, maps, sketches, tables, and electronic supplementary material, and that the article and its contents do not infringe in any way on the rights of third parties. ESM will be published online as received from the author(s) without any conversion, testing, or reformatting. They will not be checked for typographical errors or functionality. The author indemnifies and holds harmless the publisher from any third-party claims.

The author agrees, upon acceptance of the article for publication, to transfer to the publisher the exclusive right to reproduce and distribute the article and its contents, both physically and in nonphysical, electronic, or other form, in the journal to which it has been submitted and in other independent publications, with no limitations on the number of copies or on the form or the extent of distribution. These rights are transferred for the duration of copyright as defined by international law. Furthermore, the author transfers to the publisher the following exclusive rights to the article and its contents:

1. The rights to produce advance copies, reprints, or offprints of the article, in full or in part, to undertake or allow translations into other languages, to distribute other forms or modified versions of the article, and to produce and distribute summaries or abstracts.
2. The rights to microfilm and microfiche editions or similar, to the use of the article and its contents in videotext, teletext, and similar systems, to recordings or reproduction using other media, digital or analog, including electronic, magnetic, and optical media, and in multimedia form, as well as for public broadcasting in radio, television, or other forms of broadcast.
3. The rights to store the article and its content in machine-readable or electronic form on all media (such as computer disks, compact disks, magnetic tape), to store the article and its contents in online databases belonging to the publisher or third parties for viewing or downloading by third parties, and to present or reproduce the article or its contents on visual display screens, monitors, and similar devices, either directly or via data transmission.
4. The rights to reproduce and distribute the article and its contents by all other means, including photomechanical and similar processes (such as photocopying or facsimile), and as part of so-called document delivery services.
5. The right to transfer any or all rights mentioned in this agreement, as well as rights retained by the relevant copyright clearing centers, including royalty rights to third parties.

Online Rights for Journal Articles

Guidelines on authors’ rights to archive electronic versions of their manuscripts online are given in the Advice for Authors on the journal’s web page at www.hogrefe.com.
