New Releases in 2018

February 2018

Psychotherapy, Clinical Psychology, and Counseling; Psychiatry
For anyone wanting to take charge of their behavior, coaches, psychotherapists, clinical psychologists, as well as counselors/social workers.

Johannes Storch / Corinne Morgenegg / Maja Storch / Julius Kuhl

Now I Get It!
Understand Yourself and Take Charge of Your Behavior
ISBN 978-0-88937-541-3

So that's how my mind works – Now I get it!

Using the example of four colleagues working together in a small company, Now I Get It! shows us the main personality types and their strengths and weaknesses in such a way that we gain real "now I get it!" insights into what is going on in our own and others' subconscious.

How does my mind work and what kind of personality do I have? When we can answer these questions and have come to terms with who we are, then the solutions to many issues that arise in everyday life will fall into place. What sort of people do I get on with best and how can I best deal with the others? Are there recurring stressful situations in my professional or private life, and how do I resolve them?

This humorously written and illustrated book, by the world's leading experts in personality systems interaction (PSI) theory and the Zurich Resource Model (ZRM), gives us profound insights into our and other people's subconscious thoughts – so we can adapt our own behavior and interactions to improve our quality of life. Cartoons and worksheets help us on our way.

“...This book presents a very complex and comprehensive theory of personality in an extremely accessible way. Hats off to the authors and the illustrator!”

Jutta Heckhausen, PhD, Professor, Department of Psychology and Social Behavior, University of California, Irvine, CA

About the authors

Johannes Storch is a certified ZRM trainer and ZRM trainer instructor at the Institute of Self-Management and Motivation Zurich (ISMZ), a spin-off of the University of Zurich in Switzerland. His work focuses on team development with somatic markers, embodiment, group trainings, and one-on-one coaching.

Corinne Morgenegg is a psychologist, a career counsellor, and a certified ZRM trainer. Her work focuses on supporting decision and change processes as well as motivation and personality development one-on-one and in groups.

Maja Storch has a PhD in psychology and is also a certified psychoanalyst. She is the founder and scientific head of the Institute of Self-Management and Motivation Zurich (ISMZ). Her work focuses on motivation, personality development, self-management, activating resources, training, and coaching. She is the author of numerous publications for both scientific and popular audiences.

Julius Kuhl has been professor of differential psychology and personality development, University of Osnabrück, Germany, since 1986. His career has also included several years working on a project in developmental psychology at the Max Planck Institute for Psychological Research in Munich, Germany, as well as research visits to the USA and Mexico. His work focuses on self-control and affect regulation.

A multifaceted look at how young people politicize and what factors lead to their political actions

Antithetical patterns of youth political and civic engagement have been observed in recent years. Many young people are uninterested in politics and political participation, whereas others are highly engaged political actors. The patterns of their engagement and participation are changing and new forms of activism have appeared with the increasing use of new technologies and social media. With the social fabric becoming endangered in certain areas by political and economic changes, it is important to understand young people's positions towards politics and the factors that lead some youngsters to be politically active and others not.

In this collection of studies, social psychology partners with developmental psychology in order to focus on young people's political and civic engagement and investigate how young people politicize and what factors lead to their political actions.

State-of-the-art reviews of hot topics in psychology 2018

This Hotspots issue showcases some of the vibrant meta-analytic research activity that is underway in psychology, including not only applications of state-of-the-art meta-analytic methods to a steadily increasing number of substantive research fields but also methodological innovations to address challenges of meta-analytic research. It includes a ground-breaking approach for identifying hotspot topics using latent Dirichlet allocation to identify research topics of particular significance over time, a meta-analysis investigating the cross-cultural comparability of a well-established psychometric instrument capturing self-esteem, as well as replications and extensions of previous meta-analyses and a methodological contribution on effect size estimation.

Thought-provoking contributions from the world of the Rorschach –
including a special section interpreting a single case, with the aid of
the Rorschach, from different psychoanalytical perspectives

This latest volume of Rorschachiana illustrates the diversity of ideas
and applications that projective methods offer. In a general section a
diverse blend of innovative research articles are presented, including
an investigation into the personalities and psychopathologies of pa-
tients with psoriasis, a study examining whether men are more likely
to qualify their Rorschach human content responses as males and
women as females, and a research report identifying differences in
the emotional indicators in the Two Human Figures Test due to cul-
tural variables.

A fascinating special section presents the interpretations by a panel of
experienced clinicians of a single Rorschach protocol and case study
from five different psychoanalytic theoretical lenses: psychoanalytic
ego psychology, object relations theory, self psychology, interpersonal
theory, and attachment theory. An integrated discussion shows how
varied psychoanalytical theories are, but that similar conclusions
were drawn, and that together the clinicians provided a very detailed
and rich case formulation.

Rorschachiana is the official publication of the International Society
for the Rorschach and Projective Methods, now with more than 3,000
members throughout the world, which for over half a century has
played an important role in supporting the use of the instrument, as
well as helping to develop extensive empirical research on its effec-
tiveness in specific clinical situations.

Rorschachiana is also available as a journal (ISSN 1192-5604). The
journal subscription includes 2 online issues per year, access to avail-
able back issues, and the book as an annual print compendium.

Childhood Obesity

Denise E. Wilfley / John Best / Jodi Cahill Holland / Dorothy J. Van Buren

Advances in Psychotherapy - Evidence-Based Practice, vol. 39

Clear, up-to-date guidance for professionals working with children with obesity

One in every six children, and more in some ethnic groups, are obese, which can lead to serious health problems in adulthood. Successful treatment of young patients is complex, requiring time-intensive, evidence-based care delivered by a multidisciplinary team.

Help is at hand with this well written, compact book by leading experts, which gives health professionals a clear overview of the current scientific knowledge on childhood obesity, from causality models and diagnosis to prevention and treatment. In particular, the authors outline a family-based treatment method which is best supported by the evidence and meets the recommendations of the American Academy of Pediatrics and other organizations. The appendix provides the clinician with hands-on tools: a session plan, a pretreatment assessment form, self-monitoring forms, and a meal planning and physical activity worksheet.

This book is essential reading for anyone who works with children and their families, equipping them to guide patients to appropriate and effective treatment.

About the authors

Denise E. Wilfley, PhD, is the Scott Rudolph University Professor of Psychiatry, Medicine, Pediatrics, and Psychological & Brain Sciences, and Director of the Weight Management and Eating Disorders Program at Washington University School of Medicine. She has dedicated her career to researching the etiology, prevention, and treatment of obesity and eating disorders in children and adults, and to the dissemination and implementation of evidence-based practices into clinical settings.

John Best, PhD, is a research associate within the Faculty of Medicine at the University of British Columbia in Vancouver, Canada. With a background in developmental psychology, he studies lifestyle behaviors that promote cognitive and brain health across the lifespan, as well as the cognitive, neural, and environmental factors that contribute to healthy choice behavior.

Jodi Cahill Holland, PhD, RD, is a registered dietitian. After completing a postdoctoral fellowship at Washington University School of Medicine conducting research in the field of childhood obesity, she relocated to Texas where she is happily applying her knowledge to the raising of her two young children.

Dorothy J. Van Buren, PhD, recently retired from the position of Associate Professor within the Department of Psychiatry at Washington University School of Medicine. For the past 27 years she has served as a clinical psychologist, supervisor, and researcher in the field of childhood obesity and disordered eating.

Childhood Maltreatment

Christine Wekerle / David A. Wolfe / Judith A. Cohen / Daniel S. Bromberg / Laura Murray

A compact, how-to reference on assessing, diagnosing, and treating childhood maltreatment.

The new edition of this popular, evidence-based guide compiles and reviews all the latest knowledge on assessment, diagnosis, and treatment of childhood maltreatment – including neglect and physical, sexual, psychological, or emotional abuse. Readers are led through this complex problem with clear descriptions of legal requirements for recognizing, reporting, and disclosing maltreatment as well as the best assessment and treatment methods. The focus is on the current gold standard approach – trauma-focused CBT.

This book is thus invaluable for those training or working as expert witnesses in childhood maltreatment and is also essential reading for child psychologists, child psychiatrists, forensic psychologists, pediatricians, family practitioners, social workers, public health nurses, and students.

Theory of mind – precursors, lifespan development, expression, and in human–robot interactions

Theory of mind (ToM) – the ability to attribute mental states to oneself and to others – is known to develop from infancy, and to improve markedly in early childhood. What we don’t know is how ToM develops, changes, and expresses itself after early childhood and across the lifespan.

The contributions in this volume aim to further our understanding in this field. They include a systematic review of longitudinal ToM research that identifies several precursors to ToM development, including cognitive abilities and behavioral experiences. There is also a look at the associations between age, executive function, and “life history ToM,” i.e., the recognition that prior life experiences influence how individuals think, feel, and make decisions about the future. In addition, human–robot interaction is investigated, as humans of all ages ascribe mental states to robots – the more human a robot appears and acts, the more “like me” we view and treat it.
